

Credit Risk DA Project

Database Connection

Download the DBeaver SQL client to connect to the MySQL database:

https://dbeaver.io/

Follow the documentation to set up a connection to the database:

• https://dbeaver.com/docs/wiki/Create-Connection/

The database is hosted on AWS, here are the connection details:

• Endpoint: home-credit-default-risk.c7rizeij2t53.ap-southeast-1.rds.amazonaws.com

• Port: 3306

Database: creditLogin User: student

• Login Password: student

Overview

Consider you are asked to review a list of loan applications. The given "credit" database contains data on the loan applicant and their historical loan behavior. There are many columns in the database, you **don't need to use all the columns**, we will provide a list of useful column descriptions for you.

Cautions

Missing Values:

There are columns with missing values. You need to handle them during your analysis. There are multiple ways we can handle missing values: 4 Ways to Replace NULL with a Different Value in MySQL

Discretization:

Discretization means we want to convert numbers into bins, for example, age to age groups or income to income groups. There are mainly 2 reasons for this:

- It is easier to see patterns with a group of values. For example, it is better to say people older than 20 are richer than people younger than 20, instead of saying people aged 20 are richer than people aged 21.
- We want to avoid biased statistics. If we apply group by aggregation directly on a number column like age, the average statistics can be biased. For example, if there is only 1 person aged 59, then the average income of people aged 59 only represents that 1 person in the dataset.

We can do it with the CASE Function in MySQL:

MySQL CASE Function

During the analysis, you can consider converting some factors into groups.

Task 1 Run SQL via DBeaver

Follow the documentation to open the "SQL Editor":

• https://dbeaver.com/docs/wiki/SQL-Editor/

Run SQL to examine the number of rows in each table:

Table	Count
application	307,511
bureau	1,716,428

Loan Applications

The "application" table stores the loan applications. This includes:

- The demographic of the loan applicants
- The loan size or purposes
- The applicant's credit score
- Is the loan applicant has a payment difficulties with the loan.

SK_ID_CURR	ID of the loan in our sample
TARGET	Target variable, this is the future information . Will this loan applicant has payment difficulties? (1: client with payment difficulties: he/she had late payment more than X days, 0: no payment difficulties)
CODE_GENDER	Gender of the client
FLAG_OWN_CAR	Flag if the client owns a car
FLAG_OWN_REALTY	Flag if the client owns a house or flat

CNT_CHILDREN	Number of children the client has
AMT_INCOME_TOTAL	Income of the client
AMT_CREDIT	Credit amount of the loan
AMT_ANNUITY	Loan annuity
AMT_GOODS_PRICE	For consumer loans it is the price of the goods for which the loan is given
NAME_TYPE_SUITE	Who was accompanying client when he was applying for the loan
NAME_INCOME_TYPE	Clients income type (businessman, working, maternity leave,)
NAME_EDUCATION_TYP E	Level of highest education the client achieved
NAME_FAMILY_STATUS	Family status of the client
NAME_HOUSING_TYPE	What is the housing situation of the client (renting, living with parents,)
DAYS_BIRTH	Client's age in days at the time of application
DAYS_EMPLOYED	How many days before the application the person started current employment
OCCUPATION_TYPE	What kind of occupation does the client have
EXT_SOURCE_1	Normalized credit score from an external data source
EXT_SOURCE_2	Normalized credit score from an external data source
EXT_SOURCE_3	Normalized credit score from an external data source

Task 2 What is a Credit Score

In the "application" table above there are 3 credit score columns. Research online to see what is a credit score and why we need it. (Note that the scores in the database are normalized, which means they are scaled to the 0 to 1 range)

A **credit score** is a numerical representation of a person's creditworthiness, indicating how likely they are to repay borrowed funds. It is derived from various factors in a person's credit history and helps lenders assess risk when considering a loan application.

Task 3 Understand Credit Amount and Annuity

What are Credit Amount and Annuity? Fill in your answer below:

Credit Amount	Credit Amount refers to the total sum of money that a borrower is authorized to borrow from a lender. It can encompass various types of loans, such as personal loans, mortgages, or credit lines. The credit amount can be influenced by factors like the borrower's credit score, income, and repayment history. Lenders evaluate these factors to determine how much credit they are willing to extend to the borrower.
Annuity	An annuity is a financial product that provides a series of payments made at equal intervals. Annuities are commonly used for retirement planning, where individuals can invest a lump sum of money and receive periodic payments over time.

Task 4 Deduce the Loan Duration

Given the information from Task 4, we should be able to deduce the Loan Duration for each application. Loan duration describes how many periods (months) the applicant will need to pay back their loans.

Paste the SQL and part of the results below:

```
SELECT

SK_ID_CURR,
TARGET,
AMT_CREDIT,
AMT_ANNUITY,
CASE

WHEN AMT_ANNUITY > 0 AND AMT_CREDIT > 0 THEN ROUND(AMT_CREDIT /
AMT_ANNUITY, 2)

ELSE NULL
END AS Loan_Duration_Months

FROM
application
WHERE
AMT_CREDIT IS NOT NULL
AND AMT_ANNUITY IS NOT NULL;
```

Task 5 Are there any factors in the application table affecting the Credit Scores?

In the "application" table try to explore if there are any columns affecting the credit score. For example, is gender a factor?

Do the analysis of at least 3 factors for 3 different credit scores, it is expected to see different results for different credit scores, for example, a factor might affect EXT_SOURCE_1 but not EXT_SOURCE_3.

Please explain your findings with SQL statements and results:

```
1. Impact of Gender on Credit Scores
SELECT
    CASE
        WHEN CODE GENDER = 'F' THEN 'Female'
        WHEN CODE_GENDER = 'M' THEN 'Male'
         ELSE 'Other/Unknown'
    END AS Gender,
    COUNT(*) AS Total Applicants,
    SUM(CASE WHEN EXT SOURCE 1 IS NULL THEN 1 ELSE 0 END) AS Total Null Ext Source 1,
    SUM(CASE WHEN EXT_SOURCE_2 IS NULL THEN 1 ELSE 0 END) AS Total_Null_Ext_Source_2,
    SUM(CASE WHEN EXT_SOURCE_3 IS NULL THEN 1 ELSE 0 END) AS Total_Null_Ext_Source_3,
    ROUND(AVG(COALESCE(EXT_SOURCE_1, 0)), 4) AS Avg_Ext_Source_1,
    ROUND(AVG(COALESCE(EXT_SOURCE_2, 0)), 4) AS Avg_Ext_Source_2,
    ROUND(AVG(COALESCE(EXT_SOURCE_3, 0)), 4) AS Avg_Ext_Source_3
FROM
    application
WHERE
    CODE GENDER IS NOT NULL
GROUP BY
    CASE
        WHEN CODE_GENDER = 'F' THEN 'Female'
        WHEN CODE_GENDER = 'M' THEN 'Male'
         ELSE 'Other/Unknown'
    END;
Output:
        123 Total Applicants 🔻 123 Total Null Ext Source 1 🔻 123 Total Null Ext Source 2 🔻 123 Total Null Ext Source 3 🔻 123 Avg Ext Source 1 🔻 123 Avg Ext Source 2

Task 7 Are there any factors in the application table affecting the Payment Difficulties?

In the database, the TARGET column describes will there be a payment difficulty for a loan. We want to see if there are any factors in the application table that can be used to predict this future information. **Do the analysis of at least 3 factors**

Please explain your findings with SQL statements and results:

1. Analysis by Employment Length SELECT

Previous/Other Loan Applications

In the previous section, we explored if the demographic data related to payment difficulties, this section we want to see if **historical loan behavior** affecting the payment difficulties.

The "bureau" table stores the other loans of the applicants from the other lenders.

"bureau" table:

SK_ID_CURR	ID of loan in our sample - one loan in our sample can have 0,1,2 or more related previous credits in credit bureau
SK_BUREAU_ID	Recoded ID of previous Credit Bureau credit related to our loan (unique coding for each loan application), The IDs of the "other loans"
CREDIT_DAY_OVER DUE	Number of days past due on CB credit at the time of application for related loan in our sample
AMT_CREDIT_MAX _OVERDUE	Maximal amount overdue on the Credit Bureau credit so far (at application date of loan in our sample)
CNT_CREDIT_PROL ONG	How many times was the Credit Bureau credit prolonged
AMT_CREDIT_SUM	Current credit amount for the Credit Bureau credit
AMT_CREDIT_SUM_ DEBT	Current debt on Credit Bureau credit
AMT_CREDIT_SUM_ LIMIT	Current credit limit of credit card reported in Credit Bureau
AMT_CREDIT_SUM_ OVERDUE	Current amount overdue on Credit Bureau credit
CREDIT_TYPE	Type of Credit Bureau credit (Car, cash,)
DAYS_CREDIT_UPD ATE	How many days before loan application did last information about the Credit Bureau credit come
AMT_ANNUITY	Annuity of the Credit Bureau credit

Task 7 Is the number of other loans affecting the payment difficulties?

We want to see if loan applicants have other historical loans affecting their payment abilities. Hints:

- You will need to count the number of loans for each SK ID CURR in the "bureau" table.
- Transform the counts into count groups (Discretization).
- Compute the relation between average other loan count to the TARGET

Paste the SQL and part of the results below:

```
SELECT
    CASE
        WHEN Total_Loan = 0 THEN '0 Loans'
        WHEN Total Loan BETWEEN 1 AND 2 THEN '1-2 Loans'
        WHEN Total_Loan BETWEEN 3 AND 4 THEN '3-4 Loans'
        WHEN Total_Loan BETWEEN 5 AND 6 THEN '5-6 Loans'
        ELSE '7+ Loans'
    END AS Loan_Group,
    AVG(a.TARGET) * 100 AS Average_Payment_Difficulty_Percent,
    COUNT(a.SK ID CURR) AS Number of Applicants
FROM (
   SELECT
        SK ID CURR,
        COUNT(*) AS Total_Loan
    FROM
        bureau
    GROUP BY
        SK ID CURR
) AS Total_Loans
JOIN
    application a ON Total_Loans.SK_ID_CURR = a.SK_ID_CURR
GROUP BY
    Loan_Group
ORDER BY
   Loan Group;
```

Output:

Az Loan_Group ▼	123 Average_Payment_Difficulty_Percent	123 Number_of_Applicants
1-2 Loans	8.2028	71,707
3-4 Loans	7.3831	61,898
5-6 Loans	7.3361	45,937
7+ Loans	7.7976	83,949

Task 8 FreeStyle

Now, conduct your own research and analysis to see what factors from the "application" and the "bureau" tables are affecting

- The Credit Scores
- The Payment Difficulty
